

IRON FOR LOST WAX WORK

“SHARP IRON”

GENERAL

“SHARP IRON” is a device especially designed for **touch-up work, shaping and finishing** in the areas of lost wax casting :

COMPOSITION

“SHARP IRON” is composed of :

- an iron 230V with **power 17W** ensuring a significant reserve of temperature.
- a removable tip annealed copper (so pliable) with diameter 3 mm.
- an iron support

SPECIFICATIONS

- Power supply : 230 VAC 0.075 A
- Heating coiled element “high reliability”
- Stainless steel heating element
- Heat-resistant and lightweight handle
- Max temperature 350°C
- Iron weight with tip: 110 g

Optional : To increase the accuracy and quality of your work, this iron can be connected to the power regulator RP500 which allows operation over a wide range of temperatures from 20 to 350°C max.
